

- Handle all animals gently.
- Prepare a plastic container lined with a damp paper towel.
- Prepare a container filled with soil or potting mix.
- Return animals to their natural habitat after observation.
- Wash your hands thoroughly after handling soil.

*Place a worm on a damp paper towel in a plastic container so you can observe it closely.*

*Answer these questions:*

1) What colour is the worm?

---

2) How would you describe the worm's shape?

---

3) How many segments can you see in the worm's body?

---

4) Can you tell which is the front end of the worm? How do you know?

---

*Place the worm in a container filled with soil to observe the way the worm moves.*

*Answer these questions:*

1) How does the worm move into the soil?

---

---

2) How do segments help the worm move?

---

---

*Draw a detailed diagram of the worm.*
